Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6, drawn to a composition, classified in class 430, subclass 141.
- II. Claims 7-9, drawn to a method of forming a film porous film, classified in class 438, subclass 758.
- III. Claims 10-19, drawn to a porous film and semiconductor device comprising porous film, classified in class 257, subclass 632.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the composition can be employed to form a film as opposed to a porous film; the method of applying the composition and transforming the film into a porous film is not contingent upon the composition as claimed and can be used to practice using a different composition.

Inventions II and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process wherein the porous film is porous as deposited rather than by transforming into porous or by drying and forming pores.

Between inventions I and III, the product of invention III ultimately correspond to a porous film in a semiconductor device thus is not required or limited to be made by the compositions as in invention I and since for product-by-process, which invention III correspond to the process of using the composition, it is the patentability of the product and not that of the process for forming the product or semiconductor device including the porous film.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
